Commercial Subscription Architecture & Product Offerings

DOCUMENT STATUS

Finalized Production Specification

EFFECTIVE DATE

June 2026

TARGET ARCHITECTURE

B2B Automated SaaS Billing

1. Subscription Tiers Overview

The matrix below defines the limits, structures, and pricing models integrated directly into the Stripe Checkout and application data validation engine.

PLAN NAME	PRICE (USD)	SESSION LIMIT	INCLUDED INFRASTRUCTURE & FEATURES
Starter	\$49 / month	10 Sessions / mo	- Core GPT-4o video processing engine - Standard "Closing Score" framework breakdown - Standard queue priority status - Web-based dashboard performance insights - Automated system updates & email-only support
Premium	\$249 / month	80 Sessions / mo	- High-volume optimization allocation - Priority processing pipeline queue acceleration - Deep-dive technical structural flaw audits - White-labeled PDF report generation and exports - Multi-role rep tracking capability
Enterprise	Custom Quote	Volume-Based	- Bespoke operational usage caps - Multi-user team workspace infrastructure - Dedicated reporting endpoints - Custom contract billing support

Strategic Architecture Rule: Session Definition Guardrail

To insulate backend resources and prevent API token exhaustion, a single "Session" is strictly defined as an individual multi-media upload not exceeding **45 minutes in total duration**. Files exceeding this threshold consume increments of 1 session per additional 45-minute block.

2. Hard Enforcement Rules & System Logic

To avoid manual customer management or manual intervention, the software backend must execute the following infrastructure constraints based on the structural matrices:

- **Hard Usage Gate:** Upon hitting the session cap (10 for Starter, 80 for Premium), the video processing pipeline must immediately block further file uploads. A automated UI component must prompt a hard redirect link to the Stripe billing portal for plan modification.
- **Dunning Actions:** If Stripe triggers a payment failure event (``invoice.payment_failed``), access must stay open for exactly 3 days while Stripe auto-retries. On day 4, access is automatically downgraded to an inactive state without human review.
- **Zero Partial Refunds:** Subscriptions are non-refundable commercial agreements. Access parameters persist until the absolute end of the billing period cycle.
